Skills

- React JS
- Material-UI
- npm
- Java
- CSS
- Git/Version Control
- Agile Methodologies
- Jira
- Confluence

Exposed To

- C++ - College
- Ruby on Rails – College/Internship
- SQL - College
- Redux – Internship
- AWS - Internship

Experience

MAY 2019 – SEPTEMBER 2019

Software Engineer Intern / SAIC, Cookeville, TN

As a summer intern I was part of a fast-paced Agile team where I attended and often ran the daily scrums. I worked on two different projects: CCE Dashboard and the SAFe web application. SAFe was the project I spent the most time on during my internship. This was an internal project for the company where my team worked closely with the client. We first had to meet with the different department heads involved to gather their requirements. Then we created different proposals for them to choose what they considered to be the best course of action for the project. After a proposal was chosen, we begin setting up the development environment and learning the other tools that were needed for this project. Since I was with SAFe from its beginning, I was able to contribute heavily to the design of the website as well as lay its foundation. For both of these projects we mostly developed the frontend using React JS and Material UI as well as using a continuous integration pipeline as a part of our daily workflow.

MAY 2017 – AUGUST 2017

Front-End Developer Intern / Tennessee Technological University, Cookeville, TN

Over the summer of 2017 I worked as a frontend web developer on a project called ComPASS. ComPASS's aim is to create a site that would evaluate how the people living in nursing homes are treated and then use the results to better their care. On this project, I learned Ruby on Rails and gained experience in agile team development.

Education

DEC 2019

Bachelor's of Science in Computer Science **Tennessee Technological University**

Hackathons

- FiskHacks 2016
- Hack-MTSU 2017
- Co-Hosted MLH Local Hack Day at TTU 2017 & 2018
